

# FlightScope®

## GOLF CLUB FITTINGS

Why get a fitting with Flightscope? You get precise results detailing both what your golf club is doing as well as the golf ball after impact. The X3 machine uses both cameras and doppler to provide measurements that assist us in putting the right golf club(s) in your hands. Flightscope, Trackman, and Foresight are the most trusted launch monitors by tour professionals and club professionals.

Launch monitors can provide data to immediately improve your golf game. Minor reductions in areas such as back spin can increase carry distances by 10-15 yards.

Learn exactly how far you hit your golf clubs. Full bag fittings will help you pick the correct club with confidence as well as fill gaps between clubs particularly within your wedges.

Flightscope extends beyond just the driving range. It can be used for chipping and putting.

### MEASURES

Ball Speed	Roll Distance
Club Head Speed	Total Distance
Smash Factor	Lateral Landing
Carry Distance	Shot Dispersion
Launch Angle	Shot Type
Spin Rate	Face to Path
Apex Height	Face to Target
Flight Time	Club Path
